

In 20 years Oxford City Supplies have always tried to buy with a conscience. We are committed to working towards a better future.

We buy from British companies. We support ethical and fair trade suppliers. Our main chemical supplier uses 21st century formulas. We bank with an ethical bank and recycle where possible.

It's not a perfect world. By working together we can listen and learn and make a difference.

So what constitutes “Environmentally Friendly”

Something that doesn't adversely impact on the environment is the simple answer. The problem is - that just about everything we do impacts on the environment. That's breathing to driving. From eating to cleaning. So progress will be achieved by using less environmentally damaging products and packaging.

Some simple ways to move your position forwards:-

- Reducing the carbon miles created by transporting bulky chemicals from long distances.
- By purchasing from a local supplier.
- Use safe concentrated chemicals that will re use dilute & refill the day to day containers.
- Wherever Recycle the packaging.
- Use fewer chemicals.
- Use chemicals that do not harm the environment

	Plastic / Physical Waste	Chemical Waste	Chemical Miles
Ready to Use			
Concentrate chemical with manual dilution eg; 5L with pelican pump			
Concentrate chemical with portion control eg; chemical dispenser with no water connection			
Concentrate chemical with dilution control eg; automatically pre-mixed with water			

“Bio Degradable”

The law demands that cleaning products are bio degradable. This then means that the products when disposed of down the drain will break down quickly and efficiently causing no harm to humans, animal or plant life. So if sourced from a reputable manufacturer, you can be sure that they meet all of the UK and EU requirements on biodegradability. All the products in the FOOTPRINT range

- are bio degradable.
- are eu compliant
- are phosphate and phenol free
- any waste from production is fed back through a Bio Recycler
- Made to ISO14001 standards

For further information on the environmental “Green” credentials of these chemicals, why not try www.selden.co.uk and follow the link to environment.

Saving Water

The Blue Bio-Cubes contain friendly microbes which keep the urinal clean and hygienic without the need for any flushing water.

The Bio-Cube releases a special blend of natural but friendly bacteria into the urinal & waste pipes. The friendly bacteria destroy lime scale, mineral salts and the bad bacteria that cause smells. The waste is then flushed away with the daily cleaning routine.

By turning off the water you will save hundreds of pounds per urinal as well as help in saving the environment.
